Experience

2025 Oct – Present **Software Engineering Team Lead,** Bloomberg, UK.

- Lead a team of engineers as Technical Lead for FI trading workflows, collaborating with PMs, sales, compliance, and core engineering teams.
- Own technical direction and architecture for the trading platform, driving scalability, 3x trade enrichment capacity, and long-term reliability.
- Strengthen engineering practices across distributed systems, cutting KTLO bucket to 1/3rd and enabling faster, more reliable deliveries with fewer issues.

2023 Feb – 2025 Oct **Senior Software Engineer,** Bloomberg, UK.

Building a performant and reliable Fixed Income Trading blotter system using C++/Python.

- Delivered new FI trading workflows for traders, partnering closely with PMs, sales, compliance & core engg teams.
- Redesigned the trade notification services to scale to 10x trade events while improving reliability & maintainability.
- Drove automated acceptance, performance and chaos testing initiatives for distributed systems

2021 Aug – 2023 Feb **Senior Product Apps. Engineer,** AMD (acquired Xilinx), UK.

- Served as client-facing technical advisor to traders and exchanges on low-latency networking solutions.
- Analysed production latency bottlenecks and optimised kernel-bypass networking, CPU/cache usage, OS tuning, and server configuration for Solarflare X3, X2, and 8000 adapters.
- Benchmarked next-generation adapters on current and future AMD servers and contributed to C/C++ software stack for Onload, drivers, and NIC firmware.

2020 Nov – 2021 Jul **Co-Founder,** Cohst.me, India/Switzerland

- Integrated open-source video calling platform, payment gateway, MongoDB backend, and React front-end using Python to deliver a complete SaaS product.
- Built web crawler and machine-learning matching engine to connect businesses with influencers.
- Owned full-stack development while refining the business model, marketing strategy, and day-to-day operations.

2017 Sep – 2020 Aug **PhD Researcher,** APT Group, University of Manchester, UK.

- Worked in a fast-paced environment with 4 other researchers where we planned, engineered, evaluated and published research almost every 3 months.
- Led system design, implementation, project management, open-source release, and live demonstrations of FOS: the FPGA Operating System.
- Supervised and mentored 2 interns while also giving talks and demos at conferences worldwide.

2018 Sep-Nov **Consulting IoT Platform Engineer,** HTV GmbH / University of Manchester, Germany/UK.

- Delivered PetaLinux-based IoT platform with remote access for hardware accelerators.
- Developed userspace drivers for cryptography accelerators (AES and Keccak/SHA3).
- Wrote tutorials and documentation for the platform handover.

2016 Jul-Sep **Hardware Intern – Design & Verification,** ARM, UK.

- Extended verification simulator to support legacy and upcoming AMBA bus protocols for better coverage.
- Designed and implemented a new regression workflow for the lint tool and its full-continuous integration pipeline.
- Identified, reported, and resolved critical bugs in verification workflows and test benches.

2015 July-Aug **Summer Research Assistant**, APT Group, University of Manchester, UK.

- Designed a single instruction computer architecture based on data-flow graphs.
- Built a high-level functional and performance modelling simulator in JAVA.
- Summarised findings from experiments, design analysis and literature in technical reports.

Education

2017 – 2020 **PhD Computer Science**, University of Manchester, UK.

Research Topic: *Modular FPGA Systems with Support for Dynamic Workloads and Virtualisation*.
Supervised by: *Dr. Dirk Koch* and *Dr. James Garside*

Research focus: Built a modular development stack and dynamic runtime system for *elastic* and *scalable deployment* of hardware accelerators in the cloud and at the edge. Full list of 15+ publications and citations available on Google Scholar: https://scholar.google.co.uk/citations?user=GIMybIcAAAAJ

2014 – 2017 **BEng (Hons) Computer System Engineering**, University of Manchester, UK.

First-class degree with *85%* and major in both *software* and *hardware* engineering.

Final year project: Developed a library of high-performance hardware accelerators for security algorithms with a strict resource budget and vector interface.

Awards*:*

- ***President's Doctoral Scholar Award, University of Manchester – 2017-21***
  Top 3% of research students across the university who demonstrate academic excellence & leadership potential.
- ***Runner Up for Outstanding Doctoral Paper in Computer Science, University of Manchester – 2017-18***
  Second-place winner across the school for best research paper of the year.
- ***Edwards Prize, University of Manchester – 2016-17***
  For the *highest distinction* in Computer Engineering courses *throughout the degree*.
- ***IBM Team Challenge Award, University of Manchester – 2015-16***
  For the consistent sterling performance of the *team* on all Software Engineering coursework.
- ***Kate Kneebone Acorn Bursary, University of Manchester – 2015-16***
  For academic merit & showing commitment, determination, enthusiasm, personal application & promise.
- ***Golden Anniversary Prizes, University of Manchester – 2014-15***
  For Excellence in first-year studies. Given to the *top 5* students of the year

Technical Skills

*Object-oriented lang.***:** C++ • Python • Java • Ruby • Matlab
Front-end dev: JavaScript • HTML + CSS • XSL • JSON
Embedded systems: C • ARM assembly • PetaLinux • Userspace drivers
*Hardware***:** Verilog • High-level simulation • Verification test-bench • Functional coverage
OS & other software: SQL • OpenCL • Bash • Tcsh • JUnit Testing • GNU/Linux • Windows • Gitlab
